DRINKING WATER SYSTEM STATUS REPORT

I, the undersigned property owner(s), in making an application for a building permit involving a single-family residence acknowledges that this notice is being signed, notarized and recorded in compliance with Skagit County Code Section 12.48.270 in regards to drinking water quantity.

1. I agree to record this notice with the Skagit County Auditor's Office for the purpose of it being made a part of the record of title.
2. I understand that this notice will appear on any title search or record search, and we have no objection nor will we make claims against Skagit County as a consequence of this recording.
3. The drinking water source for this residential building is a fractured bed-rock drilled well with a limited yield or pump rate that may be insufficient for increased water use by any future activities or development. Well APA 166 produced water at .35 gallons per minute (1/3 gpm) for 24 hours when tested on February 21, 2008, however, due to the inability to measure the static water level after pumping, an accurate draw down and recovery test could not be performed. The approximate amount of water pumped was 350 gallons in 24 hours which is the minimum required by Skagit County Code (SCC). Adequate Water Supply per SCC 12.48.030 is 350 gallons per day. Rental housing or commercial use of the property must not occur unless additional water quantity is provided per SCC 12.38.220.
4. Water systems with filed status reports will not be used for the creation of new lots.
5. Specific drinking water system information for this lot is on file at the Skagit County Planning and Development Services. (reference # WA07-0178).
