

COVID-19 Activity is MODERATE

2.1%

of hospital visits were associated with COVID-19 this week

2023-24* COVID-19 STATS

COVID-19 activity is lower than the previous week

8
COVID-19 related deaths

21
Number of COVID-19 outbreaks reported

Influenza activity is HIGH

2.4%

of hospital visits were associated with influenza this week

2023-24 INFLUENZA STATS

Influenza activity is lower than the previous week

0
Influenza related deaths

1
Number of influenza outbreaks reported

RSV activity is HIGH

0.4%

of hospital visits were associated with RSV this week

2023-24 RSV STATS

RSV activity is unchanged from the previous week

0
RSV related deaths

1
Number of RSV outbreaks reported

What you can do to stop the spread of respiratory illnesses:

- Wash your hands frequently.
- Cover your coughs and sneezes.
- Wear a well-fitting mask when visiting healthcare facilities.
- Stay home when you are sick, and test when possible.
- Get a seasonal influenza vaccine and stay up to date on COVID-19 vaccine. Ask your provider about RSV vaccine if you are eligible.

*Due to seasonality of Influenza and RSV, surveillance occurs between October 1 and May 31. To date, COVID-19 has not shown a clear seasonal pattern, so data shown are according to the respiratory illness season pattern for comparison purposes. Death data is reported once finalized, usually after 30 days.

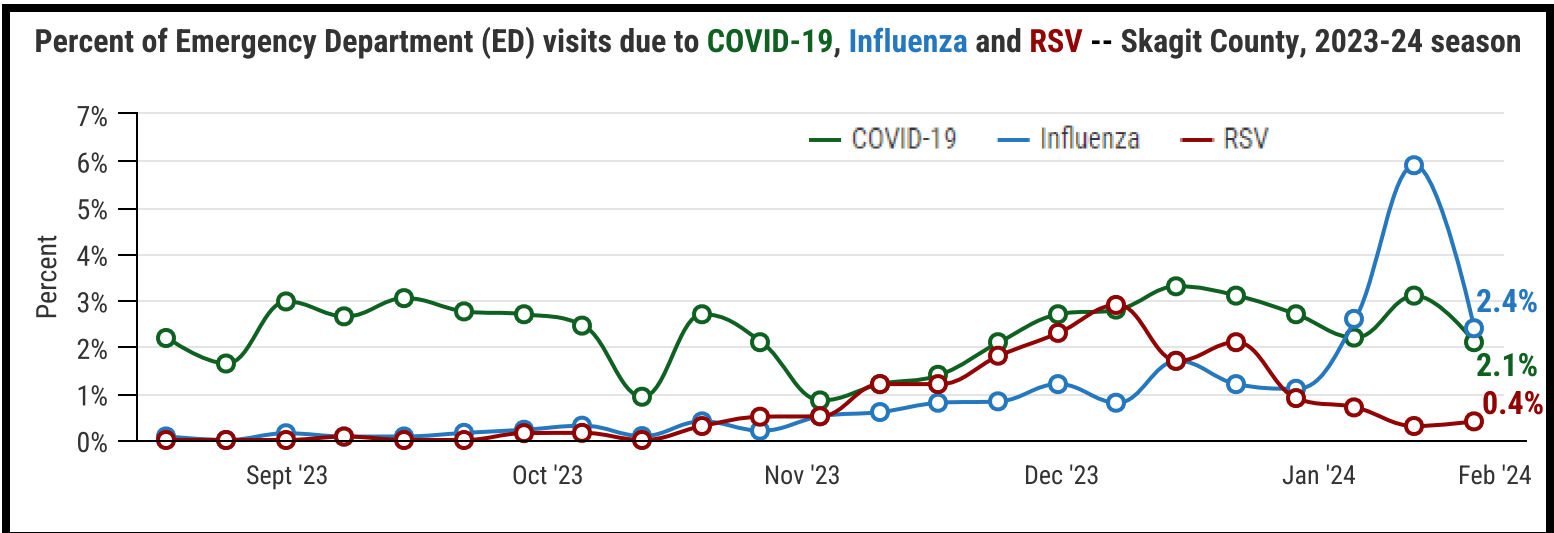

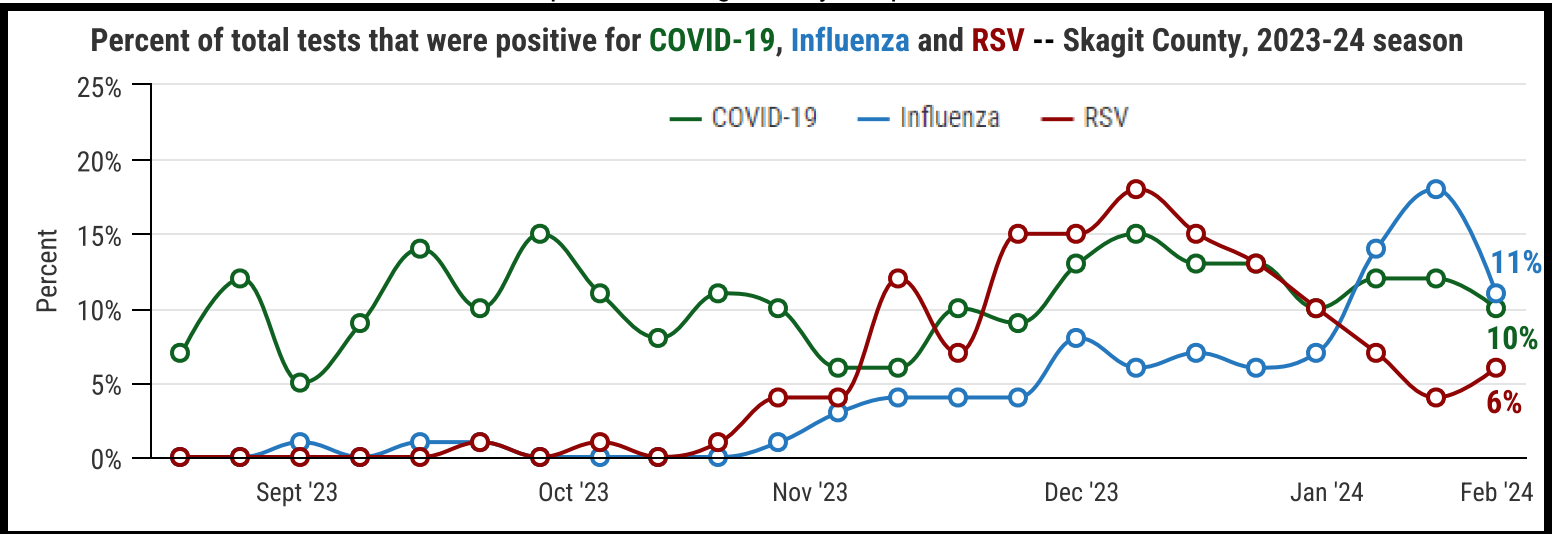

Activity Levels: Our epidemiologists reviewed county emergency department (ED) visit data from past years to determine when respiratory illness related visit levels rise above the baseline, or non-seasonal surge levels. These thresholds are used to define the activity levels in these graphics.
