ATTACHMENTS

Trip Generation Calculations	A
Counts and Turning Movement Sheets.....	B
Level of Service Calculations	C
Collision Data	D

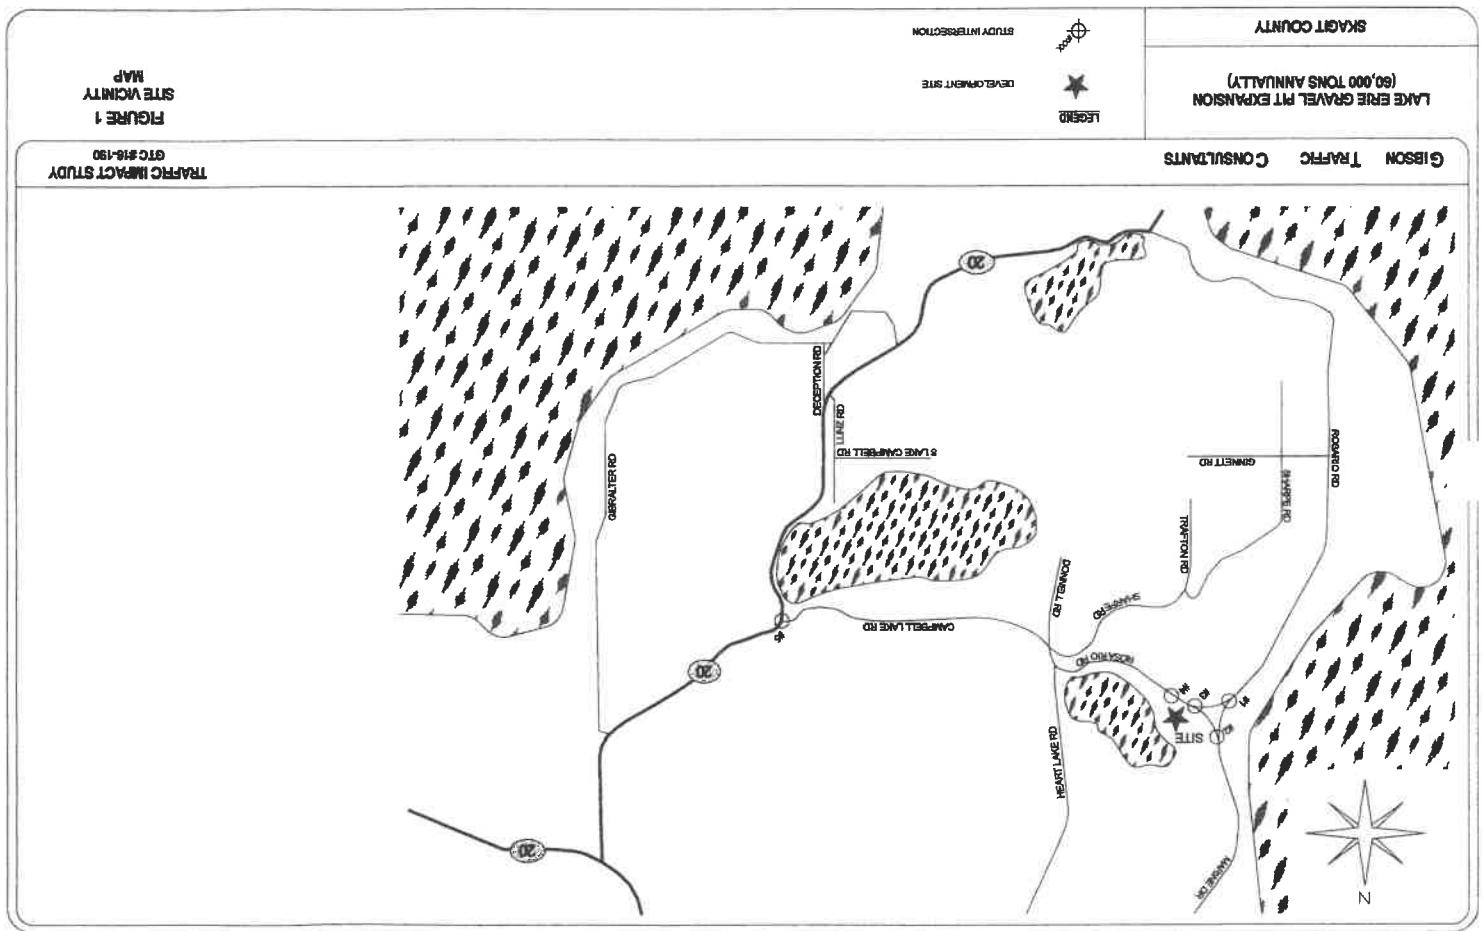

Table 1: Level of Service Criteria

Level of ¹ Service	Expected Delay	Intersection Control Delay (Seconds per Vehicle)	
		Unsignalized Intersections	Signalized and Roundabout Intersections
A	Little/No Delay	≤10	≤10
B	Short Delays	>10 and ≤15	>10 and ≤20
C	Average Delays	>15 and ≤25	>20 and ≤35
D	Long Delays	>25 and ≤35	>35 and ≤55
E	Very Long Delays	>35 and ≤50	>55 and ≤80
F	Extreme Delays ²	>50	>80

The level of service at all-way stop-controlled intersections and signalized intersections is based on the average delay for all vehicles. The level of service analysis for the study intersection has been performed utilizing the *Synchro 9.1, Build 908* software.

¹ Source: *Highway Capacity Manual 2010*.

LOS A: Free-flow traffic conditions, with minimal delay to stopped vehicles (no vehicle is delayed longer than one cycle at signalized intersection).

LOS B: Generally stable traffic flow conditions.

LOS C: Occasional back-ups may develop, but delay to vehicles is short term and still tolerable.

LOS D: During short periods of the peak hour, delays to approaching vehicles may be substantial but are tolerable during times of less demand (i.e. vehicles delayed one cycle or less at signal).

LOS E: Intersections operate at or near capacity, with long queues developing on all approaches and long delays.

LOS F: Jammed conditions on all approaches with excessively long delays and vehicles unable to move at times.

² When demand volume exceeds the capacity of the lane, extreme delays will be encountered with queuing which may cause severe congestion affecting other traffic movements in the intersection.

3. TRIP GENERATION

Trip generation calculations for the Lake Erie Gravel Pit mining operation is based on the information provided by the client and prior GTC experience pertaining to similar earthmoving activities. As stated by the client, the amount of material extracted will be 60,000 tons/year. Each truck and trailer combination can carry approximately 30 tons of material and single truck can carry approximately 15 tons. The lower tonnage of a single truck (15 tons) was utilized for all of the calculations to be conservative.

It is also anticipated that the operation would have up to 312 workdays a year; therefore, to move 60,000 tons would require an estimated 26 truck trips in & out per day (13 loads per day). It is anticipated that the in/out percentages will reflect that of gravel mines and other heavy truck operations with 15% of the ADT occurring during the AM peak-hour and as a “worst case” 15% during the PM peak-hour.

The Lake Erie Gravel Pit expansion is anticipated to generate **26 average daily trips (ADT)** with **4 AM peak-hour truck trips (2 inbound/2 outbound)** and **4 PM peak-hour truck trips (2 inbound/2 outbound)**. Trip generation calculations have been included in the attachments.

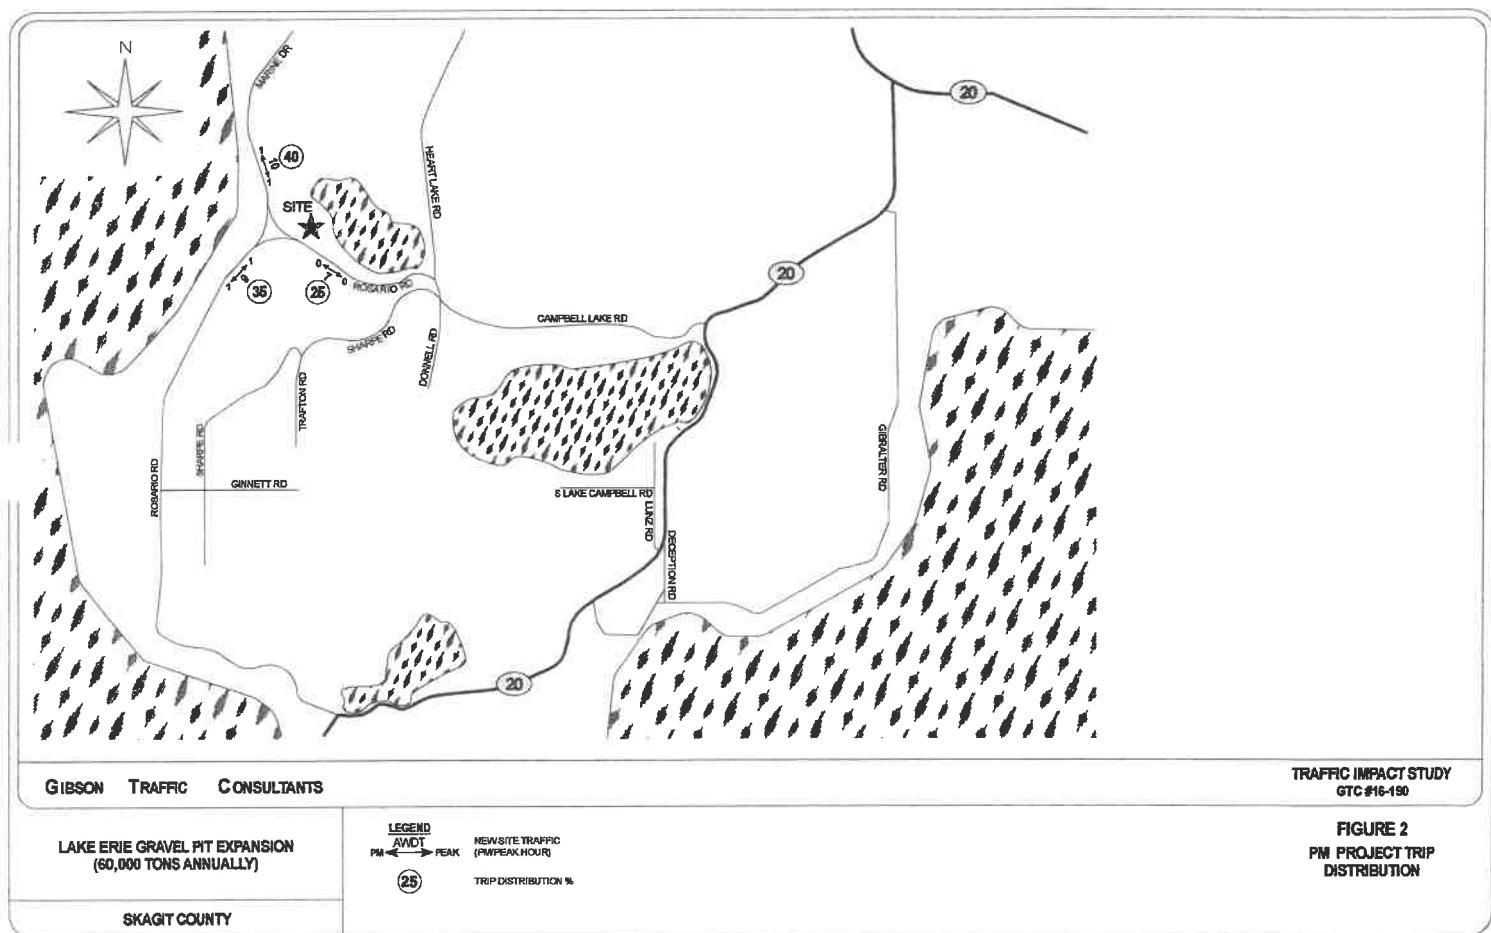

The trip generation of the site is summarized in Table 2.

Table 2: Trip Generation Summary

Land Use	Units	Average Daily Trips	AM Peak-Hour Trips			PM Peak-Hour Trips		
			In	Out	Total	In	Out	Total
Gravel Mine	13 Trucks	26	2	2	4	2	2	4

4. TRIP DISTRIBUTION

The trip distribution for the development is based on traffic trends within the project area and potential market areas. It is anticipated that 40% of the development's trips will travel to and from the north. Approximately 25% of the development's trips are anticipated to travel to and from the east and the remaining 35% of the development's trips are anticipated to travel to and from the south. A detailed trip distribution is shown in Figure 2 for the PM peak-hour.

5. INTERSECTION LEVEL OF SERVICE ANALYSIS

The following intersections were analyzed as a part of this report:

1. Marine Drive at Rosario Road - West
2. Marine Drive at Rosario Road - North
3. Marine Drive at Rosario Road - East
4. Site Access at Rosario Road - East

5.1 Turning Movement Calculations

The existing turning movements are based on counts collected by the independent count firm, Traffic Data Gathering (TDG) on August 16, 2016. The existing PM peak-hour turning movements for the study intersection are shown in Figure 3.

The 2018 baseline turning movements at the study intersection have been calculated by applying a 2% annually compounding growth rate to the existing turning movements. The growth rate is based on historic traffic volume growth along SR-20 to the east of the site. The 2018 baseline turning movements at the study intersection are shown in Figure 4.

The 2018 future with development turning movements at the study intersection have been calculated by adding the Lake Erie Gravel Pit trips to the 2018 baseline turning movements. The 2018 future with development turning movements are shown in Figure 5. The existing, 2018 baseline and 2018 future with development turning movement calculations are included in the attachments.

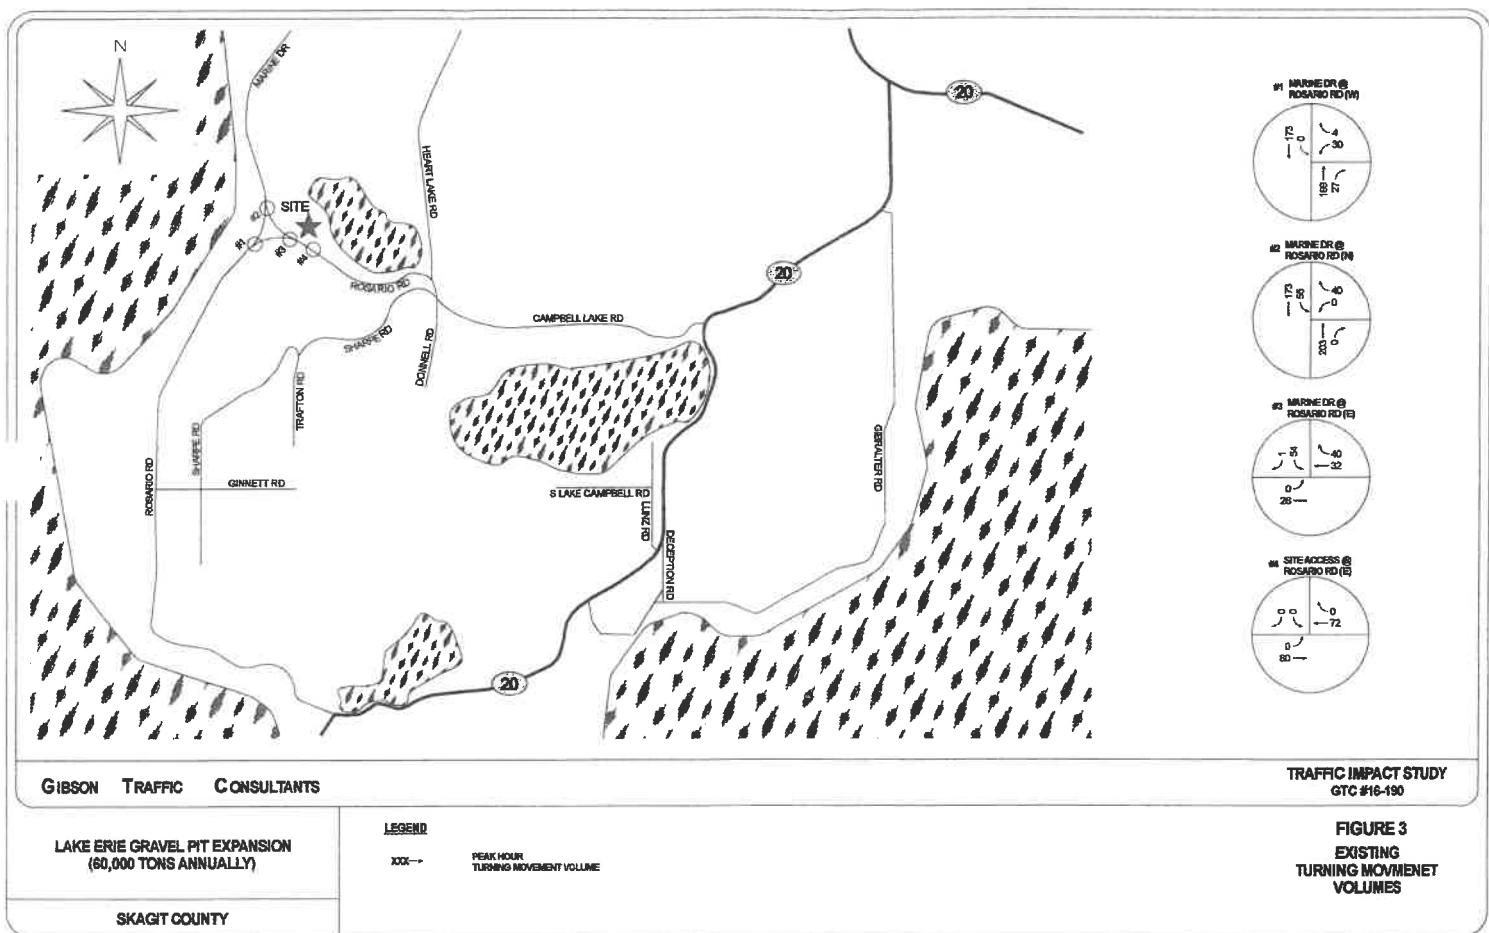

5.2 Collision Data

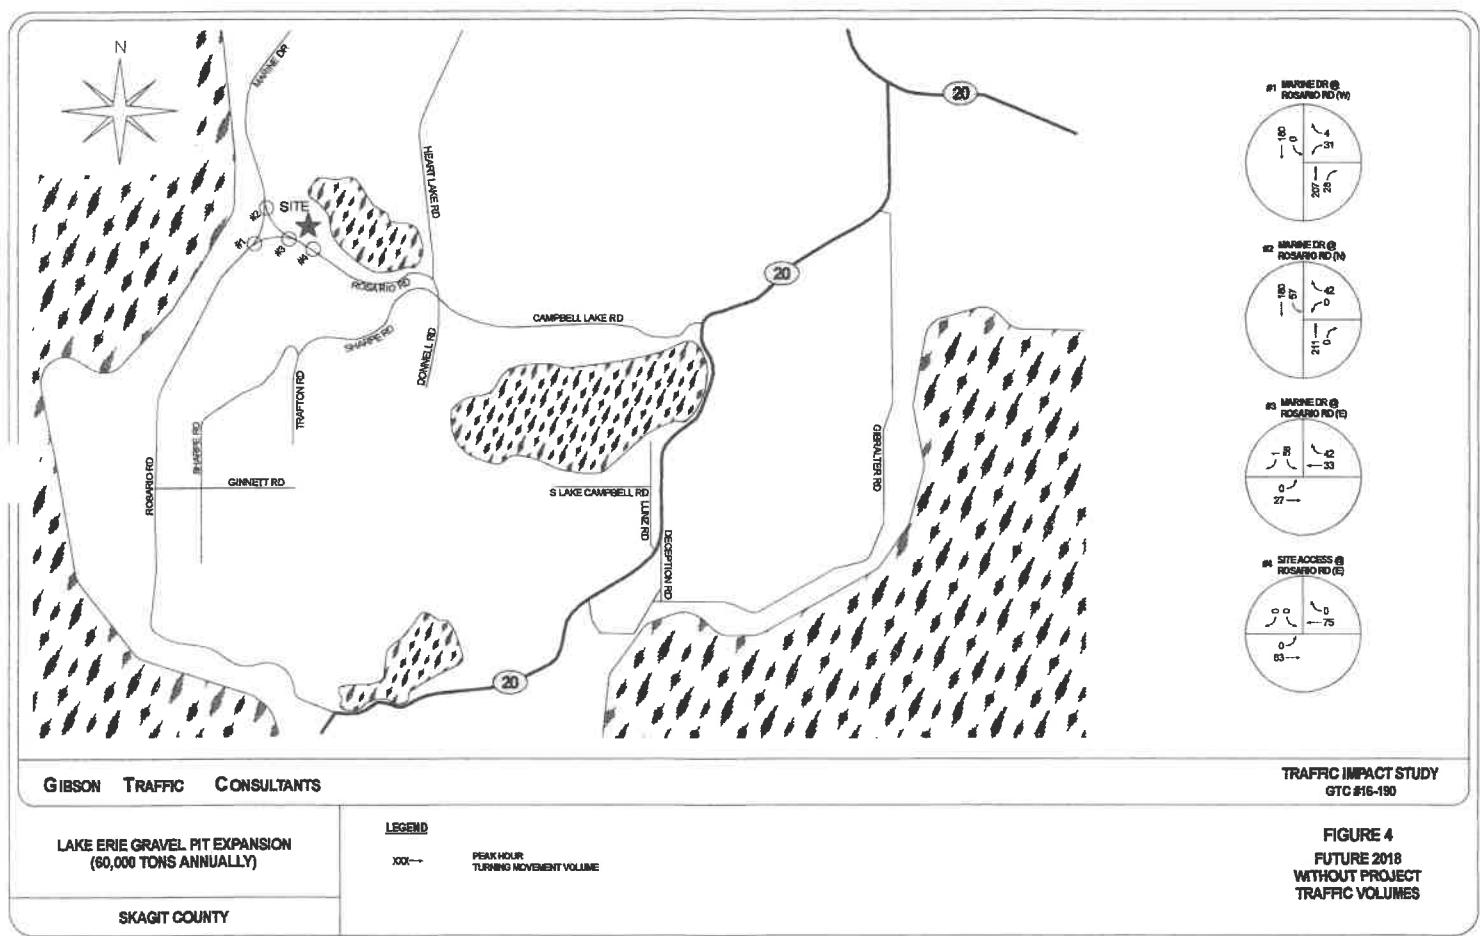

Collision data was collected from WSDOT for more than 5 years (January 1, 2011 - available 2016). The data shows there was one collision (fixed object) at the intersection of Marine Drive at Rosario Road – North and two collisions (rear-end and strikes deer) at the intersection of Marine Drive at Rosario Road – East. The collision frequency is less than a collision a year. None of the collisions resulted in a fatality. The full collision report is included in the attachments.

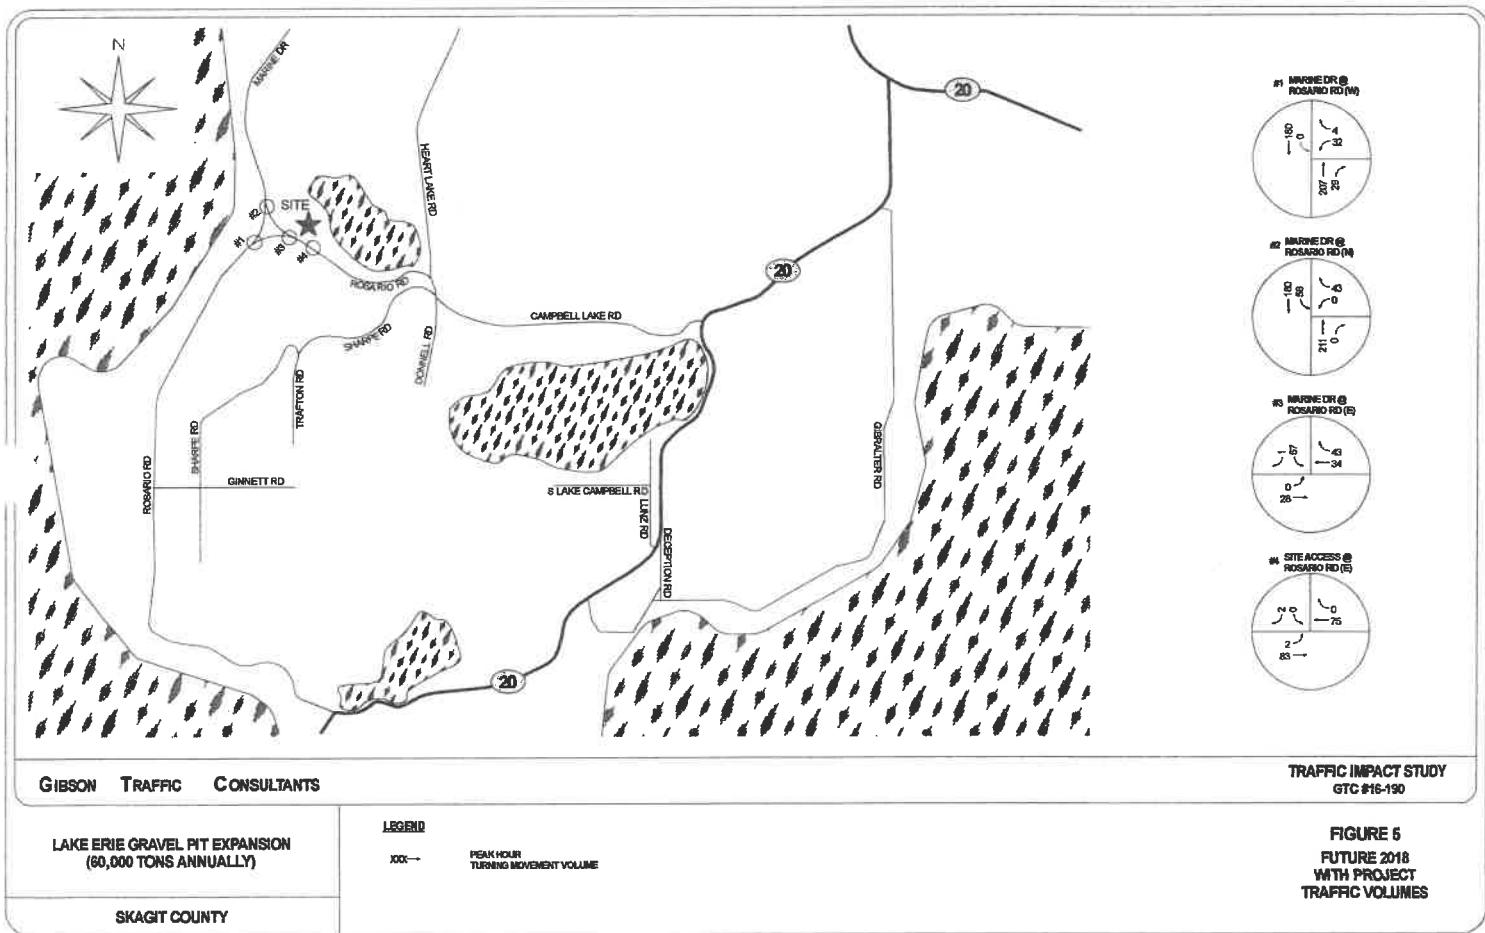

Trip Generation Calculations

1-YEAR TRIP GENERATION

	60,000 tons total in 1 year	60,000 tons/year	In a Year	In + Out per day
tons/truck	30 T & T	0%	60,000 tons	
tons/truck	15 Single	100%	4,000 truck trips	
tons/truck	0 SU	0%		
Hours per Day	10		Total	26
Days/Week	6		Daily	26
Weeks/Year	52		15% of Daily is AM peak-hour	4
Days/Year	312		15% of Daily is PM peak-hour	4
			Total	13
			In	2
			Out	2

5.3 Level of Service Calculations

The level of service calculations have been performed utilizing the existing channelization and intersection control and the peak-hour factors and heavy vehicle factors from the 2016 turning movement counts. The parameters have been used for the existing, 2018 baseline, and 2018 future with development conditions.

The intersection level of service analysis shows the study intersections currently operate at acceptable LOS B or better and are anticipated to operate at acceptable LOS B or better under the 2018 baseline and 2018 future with development conditions during the PM peak-hour. The level of service analysis is summarized in Table 3.

Table 3: Level of Service Summary

Intersection	Control	Existing Conditions		2018 Baseline Conditions		2018 Future w Development	
		LOS	Delay	LOS	Delay	LOS	Delay
1. Marine Drive at Rosario Rd - West	Two-Way Stop-Controlled	B	11.6 sec	B	11.9 sec	B	11.9 sec
2. Marine Drive at Rosario Rd - North	Two-Way Stop-Controlled	A	9.7 sec	A	9.7 sec	A	9.7 sec
3. Marine Drive at Rosario Rd - East	Two-Way Stop-Controlled	A	9.3 sec	A	9.3 sec	A	9.4 sec
4. Site Access at Rosario Rd - East	Two-Way Stop-Controlled	---	---	---	---	A	8.7 sec

The level of service calculations are included in the attachments.

6. CONCLUSIONS

The expansion of Lake Erie Gravel Pit is proposed to allow the pit to extract 60,000 tons of gravel per year. The development is anticipated to generate 26 new average daily trips with 4 new PM peak-hour trips. The analysis shows that the study intersections will operate at acceptable LOS B or better with the development traffic. No WSDOT intersections would be impacted with 10 PM peak trips; additional capacity mitigation should therefore not be required for impacts to any intersections.

Matthew Palmer
Gibson Traffic Consultants
2802 Wetmore Ave #220
Everett WA 98201

Dear Mr. Palmer:

In accordance with the Public Records Act, RCW 42.56, this letter acknowledges receipt of your request for records dated August 10, 2016 (Request Number PDR-16-2407).

We have prepared a history of officer reported crashes that occurred on the following road segments in Skagit County for the period of 1/1/2011 – *available 2016*.

- Campbell Lake Rd (Co Rd #13900, milepost 0.000 – 1.562) from State Route 20 to Rosario Rd
- Rosario Rd (Co Rd #10310, milepost 0.000 – 1.080) from Campbell Lake Rd to *500 feet southwest of* Marine Dr.
- Marine Dr. (Co Rd #10610, milepost 0.000 – 0.090) from Rosario Rd to *500 feet north of* the intersection (Marine Dr. @ Rosario Rd)
- State Route 20 (milepost 45.98 – 46.16) *at or within 500 feet each direction of* Campbell Lake Rd intersection

Federal law 23 United States Code Section 409 governs use of the data you requested. Under this law, data maintained for purposes of evaluating potential highway safety enhancements:

“ . . . shall not be subject to discovery or admitted into evidence in a federal or state court proceeding or considered for other purposes in any action for damages arising from any occurrence at a location mentioned or addressed in such reports, surveys, schedules, lists, or data.” [Emphasis added.]

Public Disclosure Request PDR-16-2407

August 11, 2016

Page 2

The Washington State Department of Transportation (WSDOT) is releasing this data to you with the understanding that you will not use this data contrary to the restrictions in Section 409, which means you will not use this data in discovery or as evidence at trial in any action for damages against the WSDOT, the State of Washington, or any other jurisdiction involved in the locations mentioned in the data. If you should attempt to use this data in an action for damages against WSDOT, the State of Washington, or any other jurisdiction involved in the locations mentioned in the data, these entities expressly reserve the right, under Section 409, to object to the use of the data, including any opinions drawn from the data.

With this package, your request for records is complete and closed.

If you have any further questions you may contact me at 360-570-2464.

Sincerely,

Julie Brown
Transportation Planning Technician 3
Transportation Data and GIS Office
