

Thomas Creek

2011

Samish River

Project Cost: \$1,639.04

Project Photos

Project Description

This project included a 150 foot long segment of Thomas Creek. The project was designed to remove invasive species within the riparian zone and revegetate approximately 0.14 acres of land on the southwest side of the stream. This included the installation of 87 native plants. Maintenance of this project will continue through 2014.
