

QUESTION & ANSWER FOR PUBLIC HEALTH CONFERENCE ROOM RFP

1. The invitation references drawings, but I was unable to locate them, are they available? **These are on the bid documents posted online under conference room audio/video drawing.**
2. The invitation says no substitutes will be accepted. May we submit an alternate bid with slight changes to the product that we believe will make a big difference in longevity and be slightly less expensive overall? **Any changes would have to be verified to be able to work with all other components. One changed component cannot result in a new system completely.**
3. The Invitation lists a podium, but does not specify a model, will this be provided by the owner, or is expected to be on the bid? **This would be custom build for the necessary components installed on it.**
4. The invitation lists 4 mics, but there are 5 mics specified, should it be four or five? **Please give detailed pricing and we will reflect that in the total bid as there needs to be more clarification on 4 or 5 but the price should be broken down and we will calculate accordingly.**
5. The invitation mentions the iPad control "or other devices" We need more clarification on if we would be providing a wireless network specific to this, or if we need to connect the DSP directly to the owner network. **There should be a provided wireless option – whether they add a network or choose to use public WIFI / Bluetooth to connect should be specified in their proposed bid.**

Q: Could you please verify the Quantity of AIR-DNA-E-3Y because the Cisco addressed AIR-DNA-E-3Y goes along with CW9163E-B but quantity 65 doesn't make sense, please clarify.

A: This bid is associated with a WLC replacement for an existing system. We have existing access points that will not be replaced at this time. We will need licensing for a total of 65 access points.

Q: Is there a block diagram or signal path diagram that illustrates the AV connections?

A: No, we do not have a block or signal path diagram created.
